

Canoe

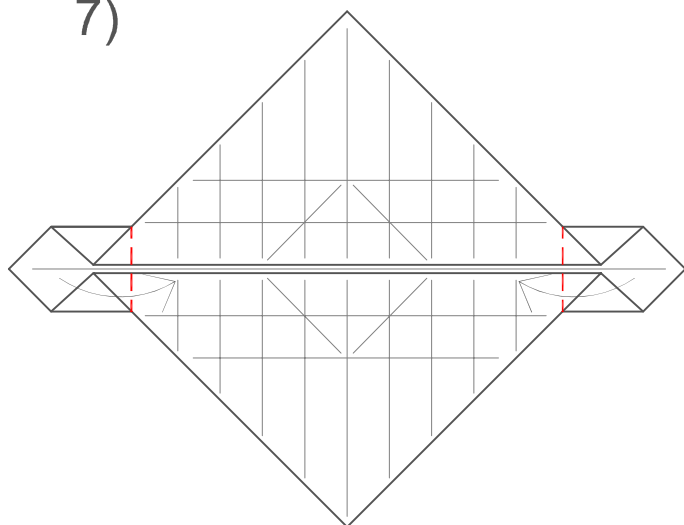

Note: For clarity step 5 and beyond have all been increased by either 125% or 150%

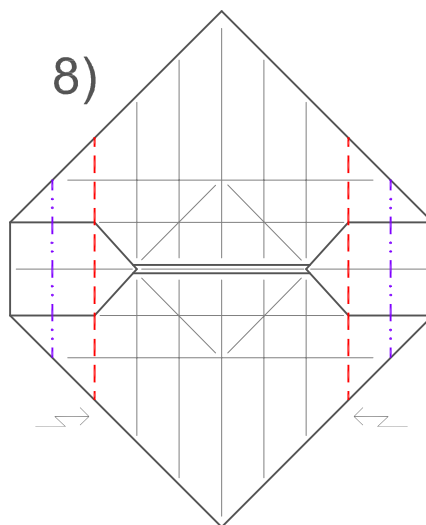

Canoe (cont)

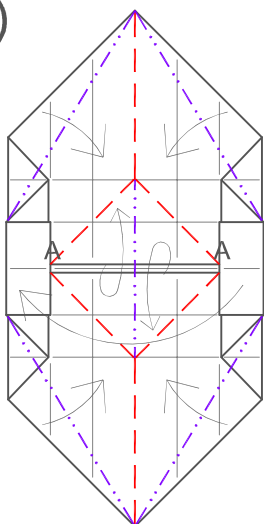

7)

8)

9)

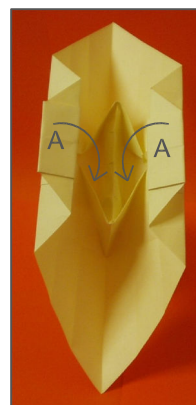

Using the creases made in step 5, open out the centre of the model, whilst folding the model in half

Mountain fold top flap A into pocket formed when the centre of the model is opened out. Look at photo to see what I mean. This should help the rigidity of the model.

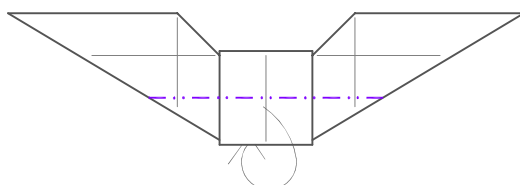

Turn thru 90°

Model in mid-fold

10)

Puff out depression in model to form the seating area and also press down slightly at either end of model to form canoe shape.

Fold behind and overlap the flap from the other side of the model.

11)

Voila!
