

Start with a 2x1 paper

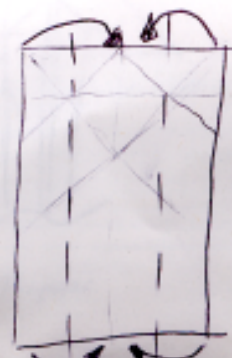

Crease Diagonals

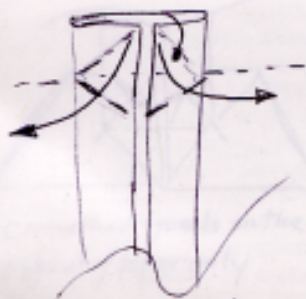

Fold corners to center. Unfold

fold top edge to center X. Unfold

Fold edges to the center line

Pull the corners out and Down while folding the top edge down

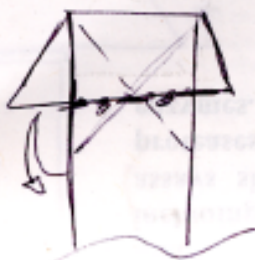

... Partially through ...

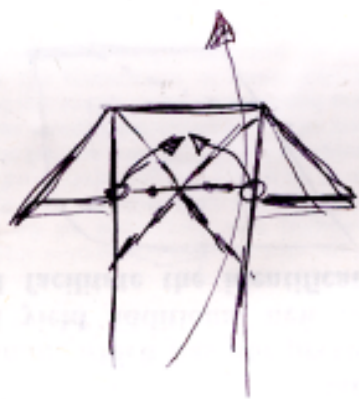

... and Done - turnover

crease the Diagonals
Don't crease the wings

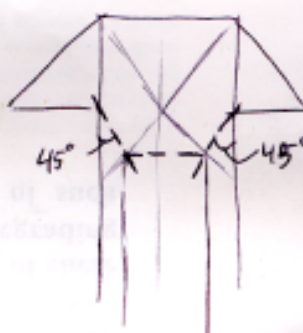

Mountain fold ~~the~~ along the bottom Edge of the wing. Unfold

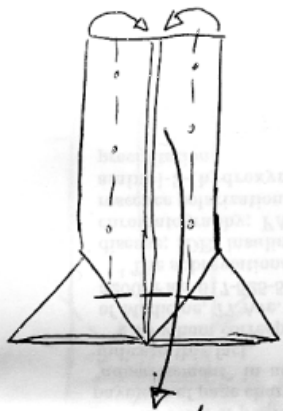

"Preliminary" Fold
along the existing creases
(Bring the two sides together while swinging the bottom of the paper upwards)

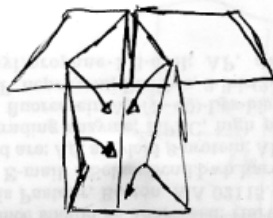

Crease by folding the Edges to the center line
Note the crease don't have to go through the "X".

Crease these three little lines

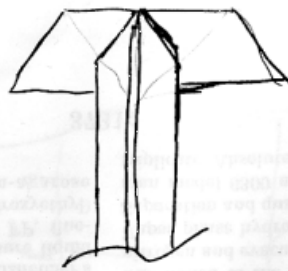

Swing the paper down
along the existing crease...

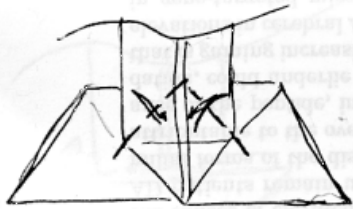

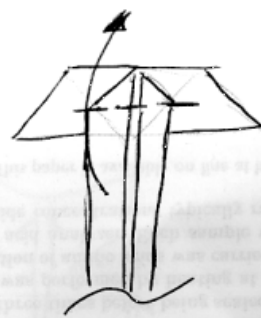

...while folding
the ~~edges~~ edges to
the middle...

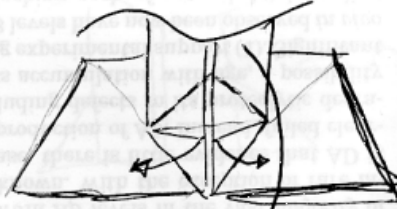

... like this.

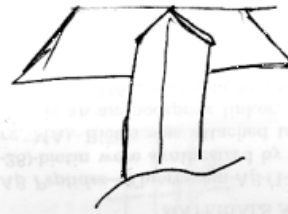

fold the paper
up

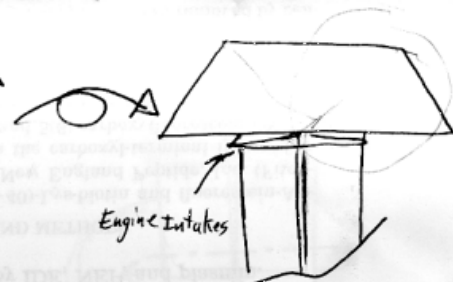

Crease the diagonals on the
top sheet of paper only

Fold the paper down again
while pulling the top layer out
along the new creases

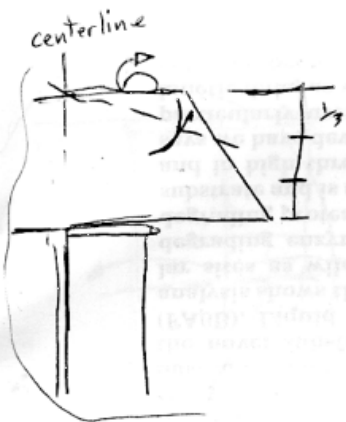

You can't see the
change until you
turn it over

Engine Initiates

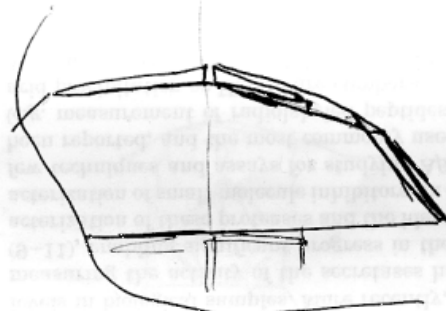

Zoom in on the
wing

Crease very hard,
fold back and forth
both ways.

Sink this corner

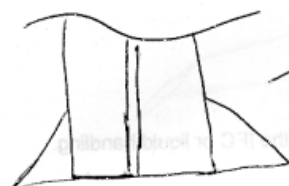

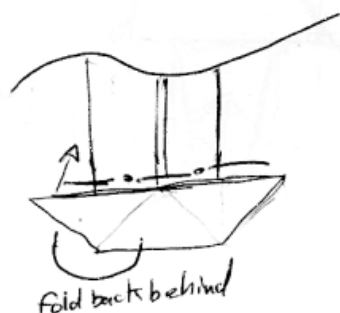

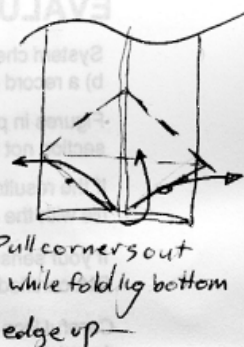

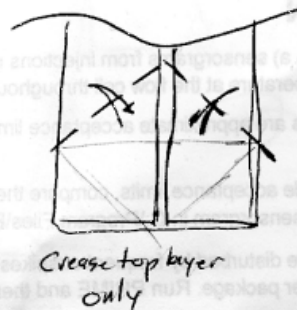

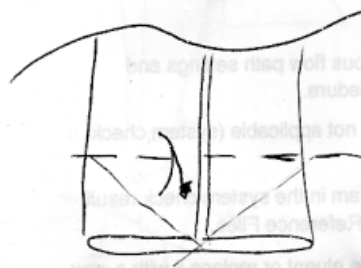

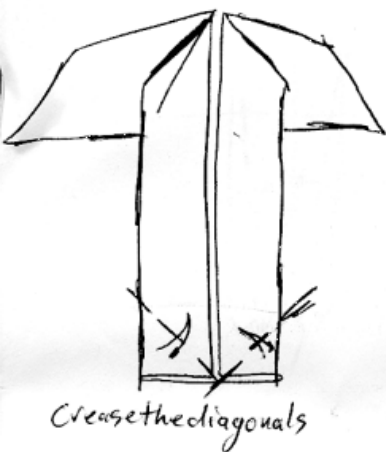

Repeat the creasing and
the sink on the left side

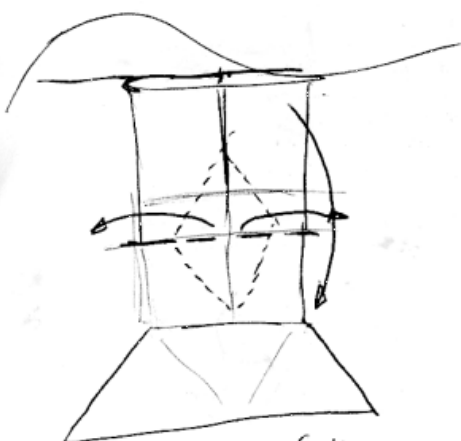

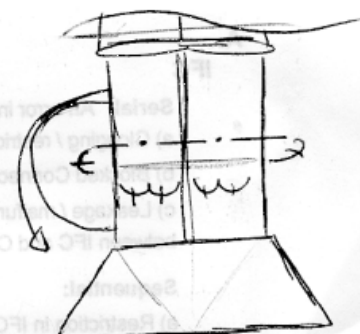

If you did the sinks right,
You can fold the front triangle
behind to reveal two engines

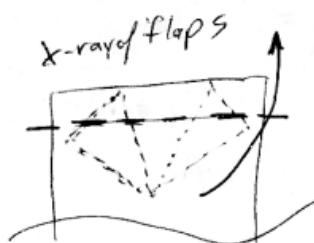

turnover

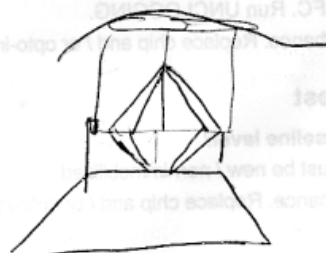

Skip the next steps if you don't want the cockpit. (e.g. monocolored paper)

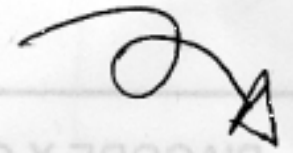

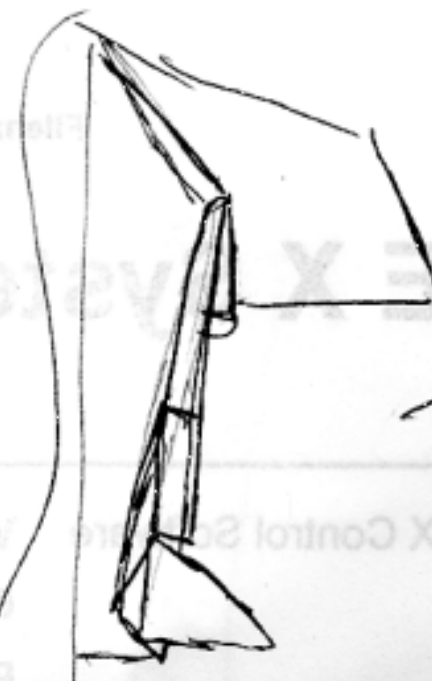

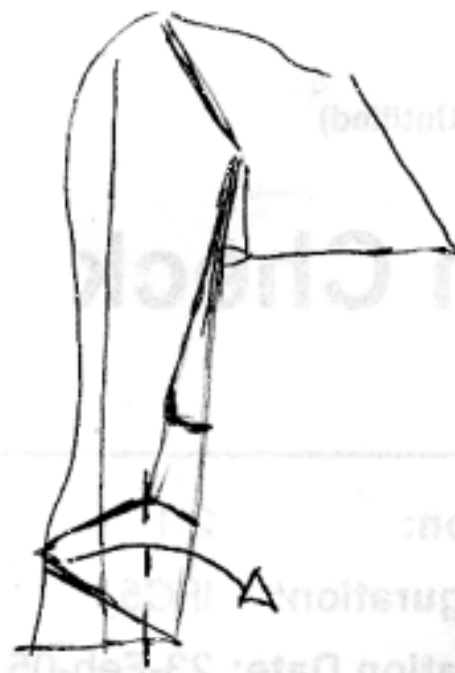

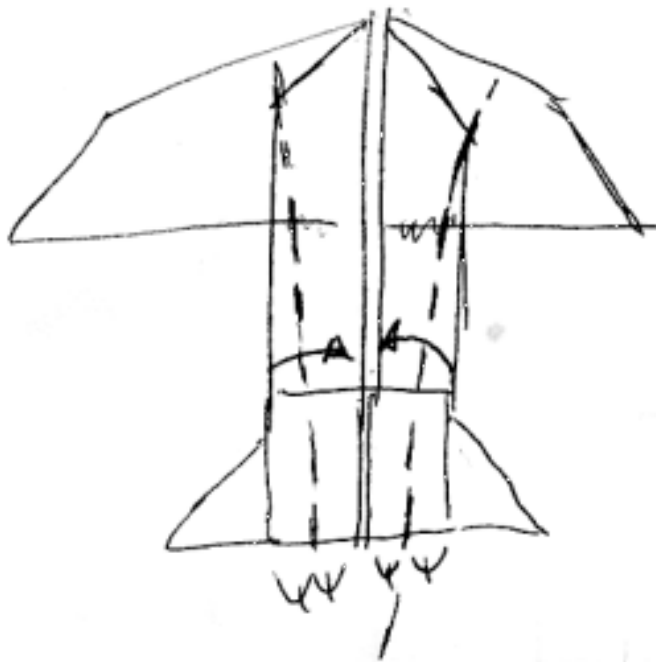

Fold the model in half (on the lower crease) while pulling the edges out. This will not fold out completely - Again - arbitrary amount

Now fold back up on existing crease. this will probably tear. Make adjustments carefully

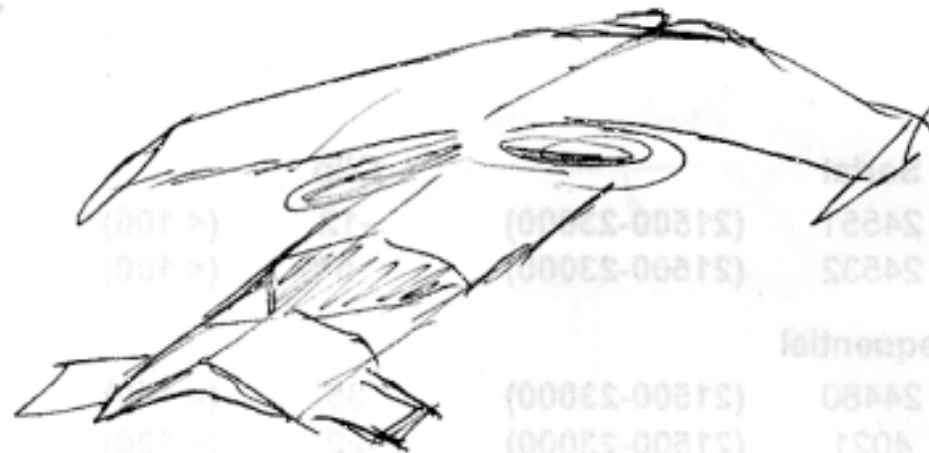

turnover

Repeat on
other side

fold the wing
tips to taste

Hoo - Ya -
