

Destroyer Droid

These are additional diagrams to create a 2 fingered Droideka.
Fold these first, and then continue with the original diagrams.

Lightly crease in 1/4 and then 1/8

Fold the corner past the 1/8 crease.

Inside reverse fold

Wrap the flap around inside...

...like so.

13

Repeat steps 10-12
on the right side

14

15

Collapse into a
preliminary base

16

Petal fold.
Repeat behind to form
a bird base

17

Mountain fold inside.
Repeat behind

18

Rotate it
counterclockwise

Now continue with the original
Destroyer droid diagrams.
Be sure to start with the two-
fingered ends pointing to the right

The Legs

The additional leg folds resize an equal sized square to match the new smaller torso. It also strengthens the legs enough so that a model folded from kami should be able to support itself.

1

2

Back leg

Torso

Fold this into a bird base. You get
the idea.

Continue with the original diagrams.
Be sure that the thickest corner gets
oriented to be the back leg.

Destroyer Droid

This is a compound origami design, using two equal sized squares. Start by folding Bird bases out of each, color side out. Use fairly stiff paper, as the legs are wobbly.

The Body:

Repeat behind

Fold the left top flap as far to the right as it will go.

Now pull that flap even further to the right, and squash fold the center triangle flat.

It should look like this. Now turn it over

Lift and squash the legs flat.

Inside Reverse fold the points to not quite parallel to the body

Valley fold left tip. Rotate 90 degrees so that the right tip is oriented up.

Pleat the tip. The exact distance isn't important.

Valley fold edges to center. Squash flat the paper that folds up with it.

Pleat so that the valley fold lines up with the edge of the paper.

12

Inside reverse fold the corners made by the pleats in the previous step.

13

Valley fold to narrow the eyes and head.

Set the body aside for now, and take your second bird base and make

The Legs:

14

Fold the top flap to the right, and a back flap to the left.

15

Inside reverse fold

16

Inside reverse fold. This will bisect the long point and also the partially obscured triangle

17

Repeat on remaining three sides

18

Valley fold flaps past the center. They will overlap.

19

Inside reverse fold the hidden flaps out. Adjust the flaps so the visible triangle is approximately an equilateral triangle...

20

21

22

Make creases along the edge of the top flap. Then unfold the flap up.

23

Refold the top point down, while pulling the raw edges outward. In a way, you are undoing a petal fold.

24

25

26

Rabbit ear the long flap.

27

Inside reverse fold the leg

28

Valley fold leg so it's sticking out of the page toward you.

29

Outside Reverse fold the legs down.

30

Inside Reverse fold the legs in.

Even though the last two folds were arbitrary, it's important that the legs are symmetrical in order for it to stand up straight.

31

Mountain fold the legs back perpendicular to the page. The model should stand on its own. Adjust the legs as necessary.

It should look roughly like this. . .

Finishing the body:

32

Outside reverse fold, but don't flatten. Let it open into a curve.

33

Mountain fold the arm back so it's pointing out of the page.

Repeat steps 32 and 33 on other arm.

34

Insert the top of the legs into the pockets just under the arms on the body.

Shape the body by rolling it up to give it a nice curve. Adjust the arms, head and legs to taste. Garnish. Serve at room temperature. Will feed two to three Jedi, or one hungry Sith.
